

Shop management System project – is a project for managing at first items and customers.

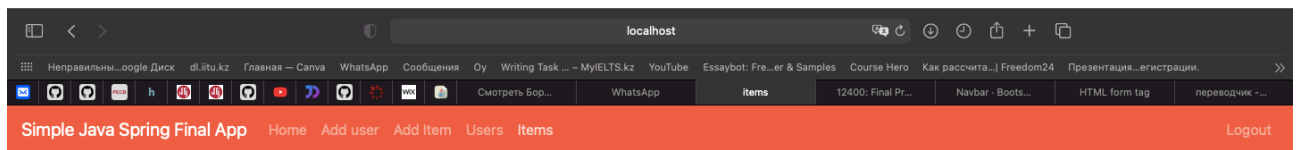

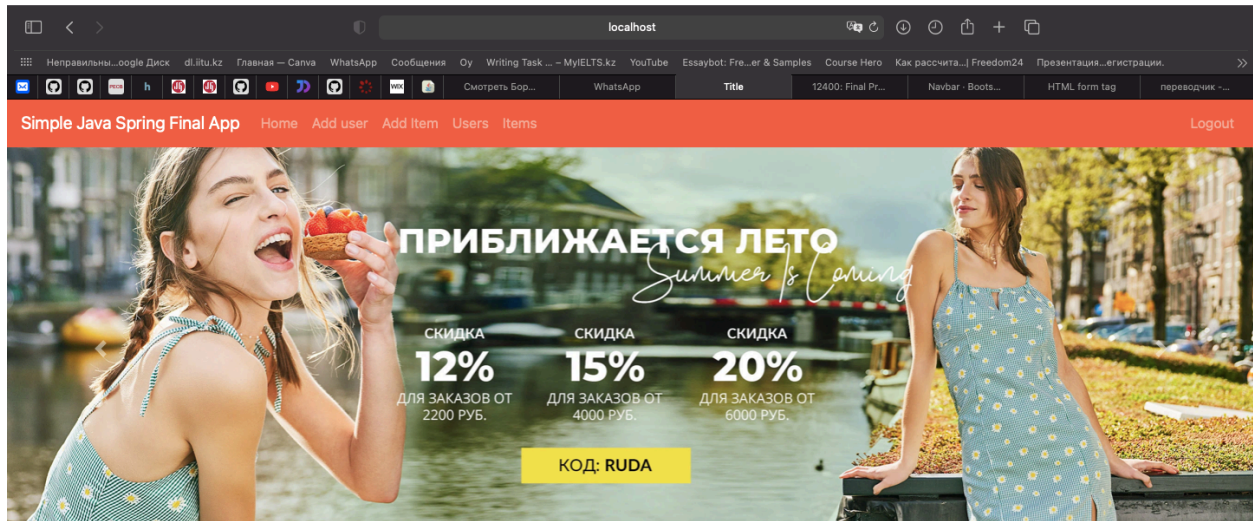

In a project we have 4 main models: Item and User, Role, Order; At the moment, a crud system has been implemented for user and product management. The main page has been developed, there are also forms for filling out new products as well as users. At this stage of development, the user has the ability to enter / register, view the main page, manage the list of users, and add new products to the database.

Customer Service:

- Retrieve all Customers
- Retrieve one Customer using Id.
- Add Customer
- Update Customer
- Delete Customer
- Should be Deployed on tomcat

- **Item Service:**

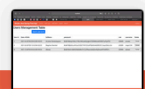

- Retrieve all Items
- Retrieve one Item with id*
- Add Item
- Update Item
- Delete Item

Items Management Table

 Search item by ID

Item id	Item name	Item info	price	Item type	Delete
2	T-shirt	item1	5000	clothes	Delete
6	qwert	item	1000	qwertyup	Delete
7	T-shirt	white with Pain	5000	summer	Delete
9	Юбка	красная с замком	5000	летняя одежда	Delete
10	T-shirt Deidara	футболка с Дейдарой	5000	oversize	Delete
11	T-shirt Pain	футболка с Пейном	5000	oversize	Delete
12	T-shirt Hidan	футболка с Хиданом	5000	oversize	Delete
